

AIDEN WILLIAMS

CORE COMPETENCIES

Cloud & System Architecture

Distributed Systems Design, Microservices Architecture, Cloud-Native Infrastructure (AWS/Azure), Kubernetes & Docker, Infrastructure as Code (Terraform).

Full-Stack Development

Modern JavaScript (React/Node.js), API Design (REST & GraphQL), Relational & NoSQL Database Modeling, Performance Tuning, Secure Coding Practices

Technical Leadership

Engineering Strategy, Team Mentorship & Code Reviews, Agile/Scrum Management, CI/CD Pipeline Optimization, Cross-Functional Collaboration

KEY ACHIEVEMENTS

Enhanced System Performance

Redesigned critical streaming service infrastructure, achieving 30% reduction in latency and accommodating 1M concurrent users.

Successful Project Delivery

Led a team that delivered a new cloud-based analytics platform, which increased customer engagement by 50% within the first six months.

Innovative Product Development

Spearheaded the development of a groundbreaking AI tool that reduced processing time by 60%, impacting user satisfaction ratings positively.

Team Leadership and Growth

Mentored junior engineers, resulting in a measurable 40% increase in team performance and a six-month reduction in project delivery times.

Principal Software Engineer | Cloud Technologies | Software Architecture | Full-Stack Development

@ Email 🔗 LinkedIn 📍 Austin, Texas

SUMMARY

Results-driven Principal Software Engineer with over 9 years of experience designing scalable full-stack architectures and driving cloud adoption. Proven expertise in technical leadership, demonstrated by spearheading a critical optimization initiative that reduced processing times by 60%. Committed to defining technical vision and fostering a culture of innovation to deliver high-performance software solutions.

EXPERIENCE

Lead Software Engineer

01/2020 - 10/2023

Google LLC

Austin, Texas

- Architected and implemented a new microservices-oriented architecture that improved system resilience and scalability, enabling an annual growth rate of 20%.
- Collaborated with product management to develop a roadmap that synchronized engineering efforts with business goals, leading to a software delivery cycle 25% faster.
- Conducted comprehensive code reviews and integrated optimized coding practices which led to a 15% reduction in application defects.
- Played a key role in migrating legacy applications to Azure, reducing infrastructure costs by 30% while increasing overall system performance.
- Facilitated knowledge-sharing sessions that enhanced team expertise in cloud technologies, resulting in reduced onboarding time for new employees.

Software Engineer

01/2016 - 12/2019

Amazon Web Services

Austin, Texas

- Developed scalable back-end services utilizing AWS, decreasing processing times by 50% for high-frequency data inputs.
- Engineered high-availability applications with a 99.99% uptime guarantee, ensuring customer satisfaction and retention principles were upheld.
- Participated in Agile development sprints and improved team productivity through effective use of DevOps practices that shortened release timelines.
- Integrated advanced AI solutions into existing platforms, yielding a 35% improvement in data processing efficiency and user engagement metrics.
- Authored technical documentation and training guides that improved team workflow and elevated operational standards across functions.

Junior Software Developer

01/2014 - 12/2015

IBM

Austin, Texas

- Assisted in the development of a cross-platform application framework using Java, which increased project versatility and reduced deployment errors.
- Engaged in rigorous testing and quality assurance practices, leading to a documented decrease in bugs post-deployment by 20%.
- Collaborated closely with senior developers to implement user feedback in software enhancements, drastically improving the user experience.
- Executed daily scrums and contributed to sprint planning meetings, resulting in a team culture focused on accountability and continuous delivery.
- Enhanced existing documentation and implementation guides, improving adoption rates among internal teams and reducing support queries substantially.

EDUCATION

Master of Science in Computer Science

2014

University of Texas at Austin

Austin, Texas
